

Types of Computer Networks

This document provides a clear and simple explanation of different types of computer networks along with their uses and examples.

1. Personal Area Network (PAN)

A Personal Area Network is the smallest type of network and is used around a person's working area.

Characteristics:

- Covers 1–10 meters
- Used for personal devices

Examples:

- Bluetooth headphones
- Smartwatch connected to mobile phone
- Mobile hotspot

2. Local Area Network (LAN)

A Local Area Network is used to connect devices within a small geographical area such as a home, school, or office.

Characteristics:

- Covers a building or small area

- High-speed connection

Examples:

- Home Wi-Fi
 - Office computer network
 - School computer lab
-

3. Wireless Local Area Network (WLAN)

A Wireless LAN is similar to a LAN but uses wireless technology.

Examples:

- Home wireless routers
 - Wi-Fi in offices, colleges, and restaurants
-

4. Metropolitan Area Network (MAN)

A Metropolitan Area Network is larger than a LAN and covers a city or large campus.

Characteristics:

- Connects multiple LANs within a city
- Medium-range network

Examples:

- University campus network
 - City-wide network provided by cable operators
-

5. Wide Area Network (WAN)

A Wide Area Network covers a very large geographical area such as a country or the entire world.

Characteristics:

- Connects multiple MANs and LANs
- Long-distance communication

Examples:

- The Internet
 - Banking networks across cities and countries
-

6. Campus Area Network (CAN)

A Campus Area Network connects multiple buildings within a campus environment.

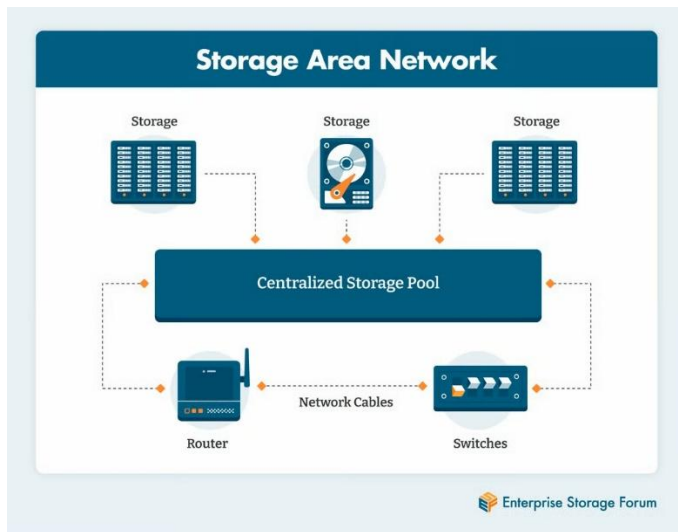

Examples:

- College or university campus
- Corporate office campus

7. Storage Area Network (SAN)

A Storage Area Network is a special network used for fast data storage and retrieval.

Characteristics:

- Used in data centres
- Connects servers to storage devices

Examples:

- Cloud storage infrastructure
- Enterprise data backup systems

8. Virtual Private Network (VPN)

A VPN allows users to create a secure connection over the internet.

Characteristics:

- Protects online privacy
- Encrypts data

Examples:

- Employees working remotely

- Using apps like NordVPN or ProtonVPN
-

9. Intranet

An Intranet is a private network used within an organization.

Characteristics:

- Accessible only to employees
- Used for internal communication

Examples:

- Company internal portals
 - Shared internal documents
-

10. Extranet

An Extranet is part of an intranet that is shared with external users like business partners.

Examples:

- Supplier and vendor portals
- Customer dashboards
